

Acknowledgements

This publication was prepared by the Employment Projections Unit of the Missouri Economic Research and Information Center (MERIC), a part of the Missouri Department of Economic Development. Other units within MERIC provided information used by the Projections Unit in making the projections. Industry employment data were provided by the Current Employment Statistics (CES) and Covered Employment and Wages (CEW) programs. Occupational employment data used in preparing staffing patterns were produced by the Occupational Employment Statistics (OES) program. These three programs are all operated in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics (BLS).

BLS also provided national data that were used in making the state and area projections. Other sources of data include the Bureau of Economic Analysis and the Census Bureau, both agencies of the U.S. Department of Commerce.

Software systems used to produce the employment projections are supported by the MicroMatrix Users Group and the America's Labor Market Information System (ALMIS) Long-Term Projections Consortium. Funding for the projections program came from Labor Market Information grant funds provided by the U.S. Department of Labor, Employment and Training Administration (ETA.)

Special thanks go to the Missouri employers who completed the surveys that provided the employment information needed for this effort.
